

Finance and Control (F&C)

Students are prepared for a career in international business economics. The content of the study is completely dedicated to all aspects related to financing and controlling international operations.

Every company needs people who understand the complex financial and economic aspects of operational management: specialists who are familiar with financial processes and the consequences of cross-border strategies.

In all aspects there is close contact with the professional field. Each student must spend at least one semester abroad. You could for example study for one semester at one of our partner universities.

For information:	internationaloffice@avans.nl www.studyatavans.com

Finance and Control (F&C)

In today's business world, national borders are becoming less and less distinct and money flows are increasingly international. To be competitive in the global environment, it is important for organisations to organise, implement and monitor their activities.

The resulting information flows are crucial for correct managerial decision-making. This demands specialists in the field of international finance and control.

To meet the need for these specialists, Avans University of Applied Sciences has developed a special Bachelor's course in Finance and Control, which is taught entirely in English. This four-year study programme, which starts at the end of August, is highly international in scope and covers all major aspects of finance and control that are essential in international business.

Preparing you for professional practice

During your studies you will be well prepared for the international field. The programme comprises two semesters of practical training: a one-semester work placement in a financial environment in year three and a one-semester financial graduation assignment for an international company in year four.

The close involvement of representatives of internationally operating companies in the development and delivery of the programme ensures that it meets the standards of the professional field. You are challenged to run projects with multinational organisations right from the start of your studies.

Degree

On completion of the programme you will gain a Bachelor of Economics degree. This makes it possible to continue your study with a course leading to your Master's degree. After graduation students can start a career in the international financial world. They can opt for various positions, either in the financial departments of international organisations or in specialised financial organisations. Just to give you an idea, graduates can find careers in positions such as:

- Financial analyst
- Manager planning and control
- Cost accountant

Structure Finance and Control
